

An invoice can be valid. And still not be ready to pay.

Resolve — the missing-evidence layer for accounts payable.

Matching is solved. Missing evidence is not.

The ERP says “mismatch”. Someone still has to find out why, from whom, and what would close it.

TODAY

Chase.

Open invoice → find PO → check receipts → email the branch → chase procurement → compare again.

WHERE THE FACTS LIVE

Outside the ERP.

A receiver’s head, a supplier’s email, a procurement inbox. ERPs record outcomes, not investigations.

WHO PAYS FOR IT

Finance.

Ageing invoices, accruals nobody can approve, and the audit question: *why did you pay this?*

E-invoicing proves an invoice was sent. Not that goods arrived.

REGULATORY CLOCK

30 Oct 2026 · 1 Jan 2027

ASP appointed · e-invoicing live for businesses ≥ AED 50M revenue. Every finance team is opening its stack this year.

THE GAP IT LEAVES

Transmission ≠ approval.

A structured invoice still cannot prove 100 boxes arrived, that AED 22 was authorised, or that the delivery wasn't already billed.

FTA Decision 244/2025 as amended by 66/2026 · MoF elnvoicing programme

The unit of work is a *case*. Not a document. Not a chat.

Four authorities. Each one does exactly one thing.

MODEL

Investigates

Reads records, finds amendments, drafts the smallest request per blocker.

CODE

Proves

Decimal checks, tolerances, receipt allocation. Only rules clear a blocker.

HUMAN

Sends

Approves recipient and message. Owns the money decision.

ERP

Pays

Receives the packet in its existing approval flow. Resolve has no payment permission.

authoritative GRN + approved amendment. Packet to ERP. No payment initiated.

Let the model investigate. Keep the money logic in code.

“It sounds right” is not an acceptance criterion.

Prototype harness: 40 labelled synthetic cases, per-type recall / precision, rules-vs-model baseline, red-team run. Same harness runs on the customer’s cases.

DAYS	WHAT HAPPENS
1–7	Ten real cases with AP, receiving, procurement. Baseline and scope.
8–14	Read-only imports, two blocker checks, reviewer screen.
15–21	Shadow mode on 100 held-out cases. Incumbent on the same set.
22–30	Assisted queue, mandatory review, drafts only. Go · narrow · stop.

Gates: ≥95% recall · ≥90% precision · 0 false clears · 0 side effects · ≥50% less investigation time

The asset isn't the rules. It's the resolution record.

YEAR 1

Two blockers.

Missing receipts, price amendments.
UAE healthcare groups, then any multi-site buyer of goods.

YEAR 2

Same engine.

New rule packs: disputes, credit notes, contract-vs-invoice. KSA and one EU e-invoicing market.

WHAT COMPOUNDS

What closed it.

For every blocked invoice: what was missing, who owned it, what resolved it, how long. No ERP holds this.

The ask: one controller, one AP reviewer, ten blocked invoices.
Thirty days to a shadow-mode result — go, narrow or stop, with numbers.

Start with ten cases →
